## TYPE MU STRIPER

(Patented—other patents pending)

Increase the beauty and sales value of your product with this new perfected Universal Striper. Toy, musical instrument, lampshade, radio and furniture manufacturers, etc., can slash striping costs with this labor-saver—

With Pressure Feed Cup for overhead work.

Almost any product, of any material, from the smallest to the largest, can be made more attractive with graceful lines, stripes, curves or circles. This Universal Striper will

prove unusually valuable to painters, finishers, manufacturers, designers, artists, photographers and architects. It makes mechanically perfect stripes varying from 1-32 in. to 3-32 in., horizontally, vertically, overhead or around corners and curves.

The MU Striper with guide on right side. For inside stripe guide swivels to left side as shown by dotted lines.

It is a foolproof tool for doing continuous striping. Nothing to get out of order. It can easily be used by anybody with only slight striping experience—and produce perfect results. Stripes with any finishing material—any lacquer, paint, enamel or striping fluids—and the color always flows evenly. The swivel guide is adjustable to any position. The adjustable tip regulates the width of the line. The flow of material is perfectly controlled to feed color slow or fast by finger lever which is regulated by a taper friction sleeve controlling opening of color valve.

The color cups are detachable and an extra pressure color cup may be attached, for striping overhead or underneath, when it is necessary to force fluid upward to the adjustable tip or when heavy colors are used for obtaining a raised or embossed stripe, scroll or decoration. The pressure cup has a screw cover with plunger operated by a spring which continually feeds the color under pressure.

Paasche type MU striper is the first and original tool with the following exclusive features:

1. Interchangeable, adjustable striping tip.
2. Revolving, swivel, adjustable guides.
3. Interchangeable gravity or pressure cups.
4. Taper friction color adjusting sleeve.
5. Sure-Grip Ball needle chuck.

It will be sent to any concern with a credit rating on ten days' free trial. If it does not do your work better than anything else you have ever used for this purpose, return it and the charge will be cancelled.
